

The importance of scientific papers publication: An approach to Animal Science Area

J Selva Andina Anim Sci. 2014; 1(1):1.

The scientific production, among the various university activities, deserve outstanding importance because it is through them that the knowledge produced in the university is diffused and democratized to the community/society. Thus, information and/or alternatives for many problems solution are raised, discussed and put into practice within the university that are to be used as future basis for the integrated and sustainable development of a community or region. Scientific writing is also the mirror of teacher and student performance in the inseparable activities of teaching, research and extension, translating the institutional force of own production. Increasingly, academic institutions understand the importance of their scientific production. And to the same disclosure is necessary to practice the scientific writing, which enables academic growth, professional development and growing within a institution. The activities in research fulfill the basic function of the University, such as knowledge generating institution, to meet the everyday demands of the society.

According to the Brazilian Society for the Advancement of Science (SBPC) in 2013, Brazil is responsible for 2,7% of world scientific output, but still occupies the 58th place among the most innovative countries in the world. Demonstrating that we must strive so we can achieve the best places in the world rankings for the production of knowledge and Science

The scientific production in the field of Animal Science is of great importance for improvement in logistics, efficiency and quality of local animal production. Based on this, research related to the area provide meaningful informations to management and production, genetic characterization of native and exotic breeds, thereby contributing significantly to increase production efficiency to farmers.

Therefore, scientific production within the academic environment is essential and the existence of efficient dissemination teams so that information regarding updates on research in Animal Science can reach readers clearly and comprehensively, allowing journals such as Journal of the Selva Andina Animal Science allow the dissemination of such knowledge.
